Settings

Crown positions

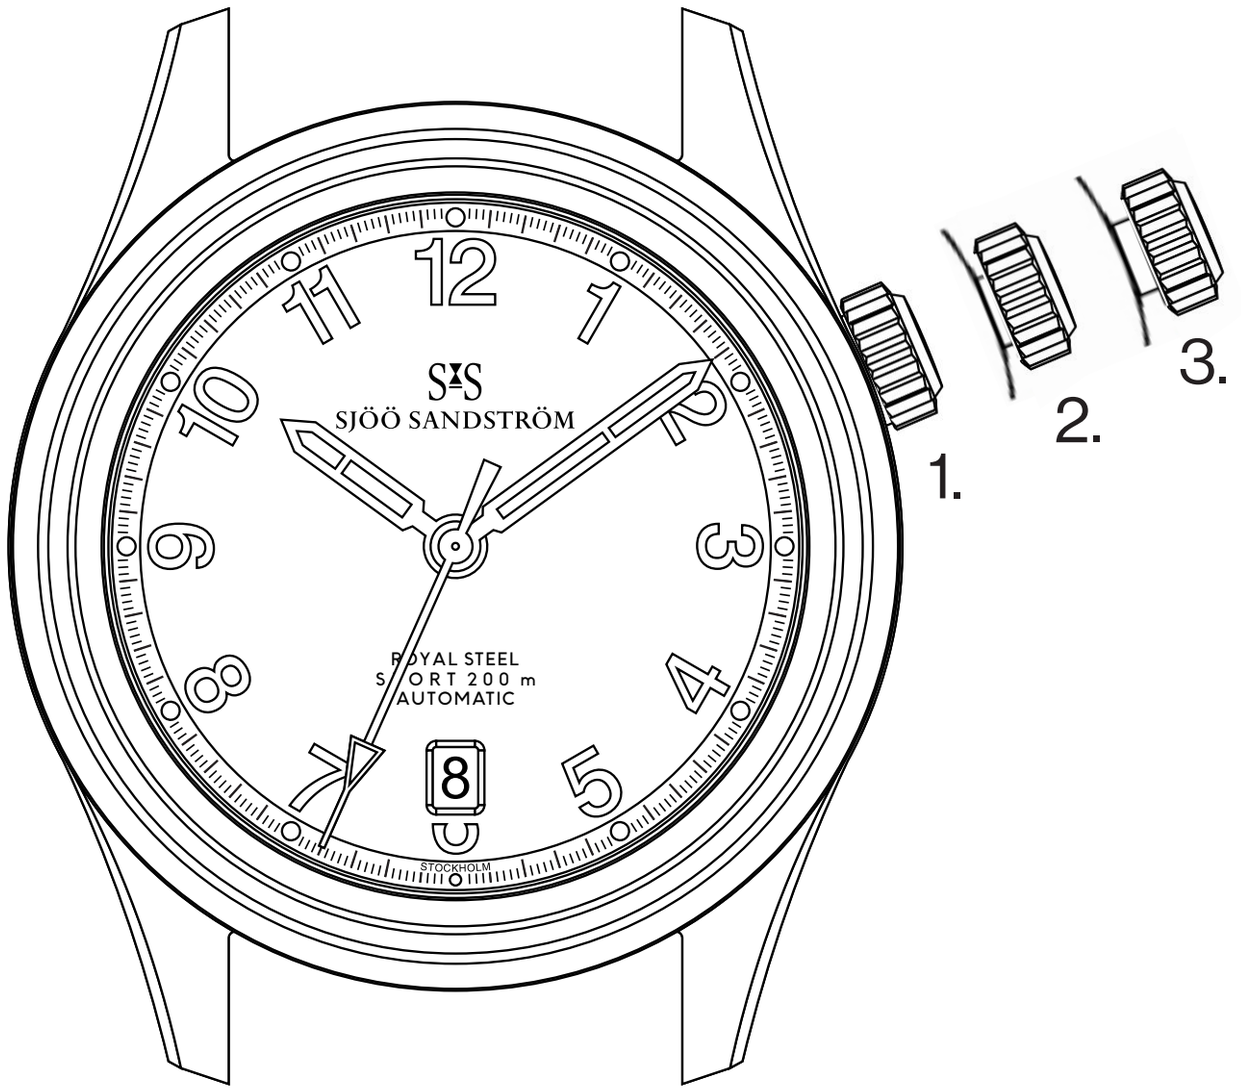

The crown has one locked position and three operating positions. Release crown by turning it counter-clockwise before winding or making any adjustments.

1. Manual winding
Turn forward to wind up your watch manually.

2. Date setting
Crown pulled out to position 2.

3. Time setting
Crown pulled out fully to position 3.

Ensure the crown is securely tightened to maintain water resistance. Press the crown gently against the case and turn it clockwise to screw it back in.

Service

We recommend you to get a regular service every 4 to 5 years at an authorized service center to keep your Sjöö Sandström watch in good condition. Check the water resistance of your watch every 12 months.

Everyday maintenance

All Sjöö Sandström watches are water-resistant. Before swimming, make sure that the crown is fully screwed down. After swimming in saltwater, rinse your watch in fresh water.

For watches with a metal strap: rinse with warm water regularly and dry with a soft cloth.

Avoid dropping your watch onto hard surfaces and exposing it to excessive stress. Magnetic fields can affect the balance-spring in watches with mechanical movements, please avoid frequent exposure to magnetic fields.

Warranty

Every Sjöö Sandström wristwatch is hand assembled with the purpose of functioning perfectly from the day of purchase and for a long time to come. This two year international warranty covers any defects in the material and workmanship of your watch at the time of delivery.

To validate Your warranty, the enclosed international warranty card must be dated and stamped by an official Sjöö Sandström retailer at the time of purchase.
